

Data

To solve this problem, we will use the following data:

- List of neighborhoods in Toronto, Canada.
- Latitude and Longitude of these neighborhoods.
- Venue data of restaurants. This will help us find the neighborhoods that have a cluster of restaurants located in them. This data would also help us identify the cuisine of the restaurant, including Indian.

Data Sourcing

1. The Toronto neighborhoods data is obtained from the Wikipedia page:

https://en.wikipedia.org/wiki/List_of_postal_codes_of_Canada:_M

example of data:

Postal Code	Borough	Neighborhood
M4A	North York	Victoria Village

2. The latitude and longitude data for the above neighborhoods:

http://cocl.us/Geospatial_data

Example of data

Postal Code	Latitude	Longitude
M1B	43.806686	-79.194353

3. Data about the restaurants near these neighborhoods will be collected via Foursquare API and the explore endpoint.
